

Attack Surface Management | ASM

- ✓ Continuously monitor and secure your entire attack surface
- ✓ Surface crucial misconfigurations and vulnerabilities for key assets
- ✓ Deploy in any environment and start seeing results in minutes

Aegis is how leading security teams secure their attack surface

Increasingly interconnected supply chains, cloud infrastructure, and remote assets means attack surfaces are fluid and growing. Aegis provides accurate, real time visibility of internet-facing assets, enabling the discovery, and remediation of vulnerabilities within IT infrastructure

Achieve perpetual ASM with the Aegis platform

- AI driven automation is the only way for businesses to reliably and effectively continuously monitor for subdomains, login pages, API's, and other exposed assets that can be leveraged by attackers.
- Aegis recognises that not all vulnerabilities pose the same threat. It will intelligently focus on exploitable issues that represent the greatest security gains and return on investment.

Discover how the Aegis platform automates and simplifies every aspect of ASM.

Supplier security ratings provide instant visibility into third-party security postures with risk scoring and compliance mapping.

When a previously unknown asset is surfaced, Aegis automatically assigns a risk rating and attribution to it.

Highlight an assets weaknesses, including outdated software, open ports, weak SSL configs, and misconfigured APIs

Aegis integrates with existing ASM tooling, enabling smooth evidence collection and seamless alerting in one place.

I can't rate the service highly enough. Unlike other providers that promise the moon but under deliver, Vambrace actually delivers on what they say and that's incredibly reassuring. I wouldn't hesitate to recommend them.
