34% of organisations have reported losing business due to missing certifications.

Move from manual checkbox to automated and continuous compliance.

Eliminate errors and streamline policy, risk, and control review processes with robust workflows and automation rules.

Store and share evidence and documentation with your teams, customers, and auditors.

> " Nick collaborated with us to develop a comprehensive ISO 27001 company policy, ultimately leading to a successful audit. More recently, we partnered with Nick again to complete an ISO 27001:2022 gap analysis, helping us identify the necessary changes for the new standard, ensuring we're prepared for our upcoming re-certification.

Our vCISO expertise simplifies the ISO 27001 process

All Aegis clients are assigned their own Virtual CISO (vCISO) as standard. This experienced cybersecurity and compliance leader will be the main point of contact throughout our relationship, and will lead the ISO 27001 certification or re-certification process.

Prepare with a pre audit

Pre-audits are recommended when obtaining or maintaining ISO 27001 certification as they avoid delays and costly remediation later in the process.

They are particularly important if this is your first ISO 27001 certification, or your ISMS has been recently developed or significantly changed.

Reduce the risk of a data breach

ISO 27001 certification demonstrates strong information security practices to clients.

Your vCISO will identify which of the 93 controls that make up ISO 27001 are most relevant to your organisation, and need to be implemented to lower the risk of a data breach and all the follow-on impacts that can bring.

Accelerating your audit and certification

Your ISO 27001 audit and certification award will be handled by our partners at A-LIGN. They possess over 20 years' experience and are a leader in security compliance audits, serving companies of all sizes. As an accredited certification body, A-LIGN has helped hundreds of organisations meet their ISO 27001 certification and re-certification needs. To learn more visit **www.a-lign.com**

> A-LIGN's ability to complete SOC 2 Type II and ISO 27001 at the same time was very helpful. Combined meeting and portal response times were excellent, reducing time wastage for our team.
