DEVICES PROTECTED

- ✓ Managed 24 / 7 /365 protection right across your network
- ✓ Effective protection from the growing ransomware threat facing UK businesses
- ✓ No EDR solution in place? Deploy and get started in minutes using our single agent

Endpoints are the most common entry points for cyber-attacks

Through our SOC we record activities and events taking place on every endpoint on your network. Our continuous monitoring detects both known and novel malicious behaviors fast, while automated response actions assist our team in containing threats before they spread.

✓ THREAT SUCCESSFULLY ISOLATED

vambrace

Already have EDR in place but struggling to see ROI? We make it work for you.

Overwhelming teams with alerts, tuning, or staffing demands? **We get it.**

Our Managed EDR service works with any existing solution and will enhance your capabilities, either by filling time or skills gaps, or by bringing the whole operation into our SOC, providing you with a full 24 / 7 monitored, optimised, and managed EDR.

Many security teams invest in powerful EDR solutions only to discover they are left with:

- Endless alerts with no context, prioritisation, or support.

- False positives that eat up time and resource.

- Missed detections because tuning rules are complex and perpetually evolving.

- A lack of staff to monitor dashboards around the clock.

⚠ **39 ALERTS NOT ASSIGNED**

ACTIVE THREATS DETECTED

Our solution: Managed EDR

We don't replace your existing EDR solution, we unlock its true value.

Our experts take on the heavy lifting of monitoring, triage, and response to unlock your existing EDR's full ROI potential.

What we do for you:

- **Alert Tuning & Noise Reduction**: Fine-tuning playbooks and detections suppresses false positives.

- **Expert Investigation:** Suspicious alerts are enriched with threat intelligence and mapped to known attacker tactics.

- **Active Response**: Isolate compromised devices, kill malicious processes, and contain incidents in minutes.

- **Actionable Reporting:** Regular executive and technical reports that prove value and support compliance.

The benefits of managed EDR

- Maximise your ROI and get the protection you paid for from your existing EDR.

- Reduce alert fatigue and free your team to focus on other priorities.

- Accelerate initial response to contain incidents before they spread.

- Finding, recruiting, and retaining good people is hard. Scale your security team instantly with skilled SOC analysts and responders without expensive and time consuming hiring.
