Managed Vulnerability Scanning | MVS

MANAGED VULNERABILITY SCANNING
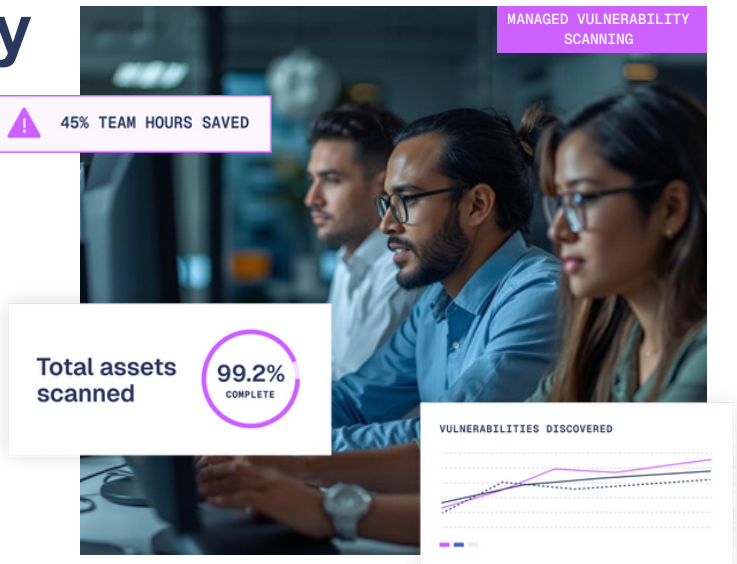

⚠ 45% TEAM HOURS SAVED

Total assets scanned — 99.2% COMPLETE

VULNERABILITIES DISCOVERED

- ✓ Expose and close weaknesses across your constantly changing attack surface

- ✓ Get instant visibility and control over all your IT assets

- ✓ Enhance your ongoing patch management programs without extra manual input

Perpetual vulnerability management across your entire network

Vulnerability scanning is so effective because it systematically and at scale surfaces known issues before attackers can take advantage, and in the real world it is avoidable issues like outdated software, missing patches, and misconfigurations that cause most breaches

Already have vulnerability scanning in place but struggling to see ROI?

We make it work for you.

Many organisations investing in scanning solutions discover issues later on such as:

- Endless alerting leaves them with no context or prioritisation.

- False positives eat up time and resources.

- Detections are missed because scans get delayed and tuning rules forgotten as teams naturally evolve over time.

- Skills and resource gaps start to appear without the right knowledge to interpret and prioritise scan results.

24 / 7 access to rapid and experienced responders

Expert validation reduces the time spent chasing false positives

All our managed services instantly takes away the challenge and cost of building an internal team

Our pricing is simple. We cover all types of assets in all types of environments for one predictable all in annual price.
