

# The Vambrace Security Operations Centre | SOC

- ✓ Overwhelming teams with alert, tuning, and workload demands? We get it.
- ✓ Scale your security operations with a hybrid or fully managed SOC
- ✓ Flexible modules, tailored to your needs around flexibility, coverage, and support

## Managed cybersecurity services built from six modules

Regardless of what you make, sell, or do, cybersecurity is unlikely to be your area of expertise, but it is ours. With 43% of UK businesses reporting a cyber-attack in the last 12 months, being prepared is critical to ensure your own ongoing success story continues.

**See the value of the Vambrace SOC with our FREE 30 day trials. No upfront payment and no commitment.**

Reject unreasonable pricing and ingest what you need when you need it with Sumo Logic's Infinite Log Capacity.

Managed Detection and Response (MDR)

Cloud Native Security Incident and Event Management (SIEM)

Threat Intelligence

Incident Response (IR)

Endpoint Detection and Response (EDR)

It's refreshing to have real face-to-face conversations with the team instead of just emails or calls about contracts. Their openness and willingness to travel to meet us and discuss our needs in detail makes a huge difference. I have no concerns, only confidence.

# Continuous 24 / 7 protection is hard

The biggest obstacle to building an in-house SOC is achieving continuous coverage. Training, holiday, and illness gaps all need covering, and that is before you start with the time hungry business of recruitment and people management. **With Vambrace, all of this goes away.**

Our team hit the ground running and you don't need to worry about unexpected costs, even if you are scaling rapidly.

## Already have solutions in place but struggling to see ROI?

Unmanaged tooling will generate a flood of noisy alerts, overwhelming smaller or inexperienced teams.

We unlock a tools' true potential so you get the performance you paid for, either by filling time or skills gaps, or bringing the whole operation into our SOC.

## Helping teams adapt to change: The future is in the cloud

The time workers spend in browser-based environments has doubled in the past 5 years and it is a challenge to adapt in-house security skill sets to reflect this fast moving shift.

We partner with leading cloud focused organisations to facilitate access to reliable, cost-effective, and on-demand cloud based security solutions and skills to secure critical systems, IP, and data.
